

# 5 reasons to reset the diagnostic

We recommend re-setting the Sumdog diagnostic every 4 months, here's why:

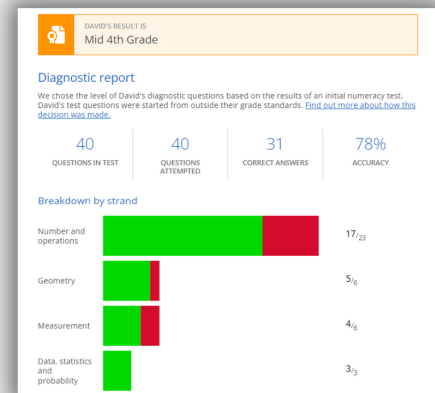

**1** Using the most recent diagnostic result, identify at a glance who is on track and who needs extra support.

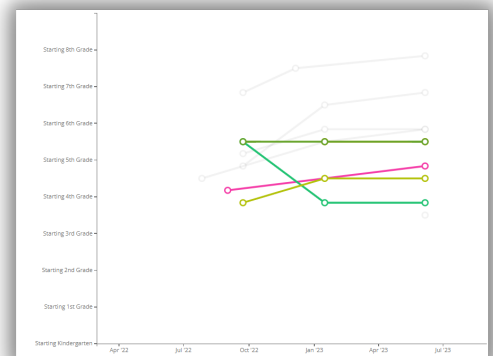

**2** Identify areas of strengths and areas where more teaching or practice is needed.

**3** View individual results to help pinpoint areas for intervention or provide further learning opportunities.

**4** Track students' diagnostic results over time. We recommend resetting 3 times throughout the year to show growth.

**5** Updating the diagnostic before a contest will mean your students will be set level-appropriate questions during the contest week.
