

# Using the Sumdog Multiplication Tables Heat Map

The Sumdog heat map will provide the average accuracy, speed and fluency of your students, weighted towards the most recent answers, and using our differentiated student chooser you can then make sure that your students are focusing on the tables relevant to them.

- Teachers can use the **heat map to quickly identify** which tables their class need to practise more.
- Ability to change the **reporting metric** between **accuracy**, **speed** and **fluency**.
- Helps to **improve automaticity** by focusing pupil practice on tables questions.
